Join Sage City Live roundtable host:
Django Dunn

Django left behind a sputtering acting career in 1994 to join the Sage community. While in college he took a co-op position in tech support for Softline Systems Inc. and has never looked back. After five years with Softline he started working with a Value Added Reseller (VAR) in Calgary learning how to support and customize Sage 300 ERP (then Accpac). After six years there, he started out on his own, creating customizations for other Sage 300 ERP VARs across the globe. Currently, Django starts and ends each day designing, writing, releasing, and supporting customizations for companies of all sizes in a wide variety of industries. Custom screens, automations, integrations, reports, and completely standalone applications are all on his resume—including non-accounting applications. Django believes a new golden era of customization has arrived and is excited for the future of the Sage 300 ERP product line. Django lives with his wife, two children, and Boston terrier, Percy, in Langley, BC.

Business roundtable
When does it make sense to extend your ERP system with customizations, and when should you look further inside the box?
